Re: EPA Superfund Administrative Reforms Overview

The Keystone Task Force recently sent a letter to Tom Voltaggio, U.S. EPA. We are forwarding a copy to you because of the importance of the EPA Superfund Administrative Reforms Overview. These reforms provide all stakeholders with a very good basis to reach a resolution for the Keystone Landfill Site. But, it will take a major effort by all of us to make this happen.

EPA, DEP and our political representatives need to hear from each and every responsible party, not just from your legal counsel. Some responsible parties have been or will be relieved of liability, but many won't. The OU I design plan is nearing completion. Time is running out. We are supporting a remediation that will result in substantial savings to the remaining responsible parties. If you wish to take advantage of this opportunity, then it's time to show a united front and join us in urging EPA to use these reforms to reach a resolution at this site.
